

polyurethane cradle

Configuration

**model : UCHR
UCRS
UCAR**

GENERAL :

UNISON has complete capability to mold high density rigid urethane cradle in pipe size from 15A through 1500A.

We are able to vary our basic chemical formulas to produce the broadest range of urethane molded products specifically designed for the exacting requirements for cryogenic service.

Our customers are guaranteed rigid urethane cradle molded to the highest quality control standards and assembled into an insulated pipe support unit.

High density rigid urethane cradle possesses a unique cellular structure.

Due to the roundness of the cells as well as the heavy cell wall thickness, the compaction typical of some cellular foams under cryogenic temperatures are eliminated. Under cryogenic conditions the gas within the cells contracts, liquifies or solidifies while the cell walls maintain the integrity of support.

At cryogenic temperatures each cell develops a partial vacuum resulting in excellent insulating properties.

APPLICATION :

Nowadays, the highest degree of reliability is required in the field of pipe supporting system design for petrochemical plants including low and ultra-low temperature liquefied natural gas (LNG), liquefied petroleum gas (LPG), liquefied ethylene gas (LEG), liquefied nitrogen(LN_2) and liquefied oxygen(LO_2) are getting larger scale.

And we have developed high quality urethane cradle made of high density polyurethane foam which has low thermal conductivity.

Our products are already been used and well received in various LNG, LPG and other petrochemical plants.

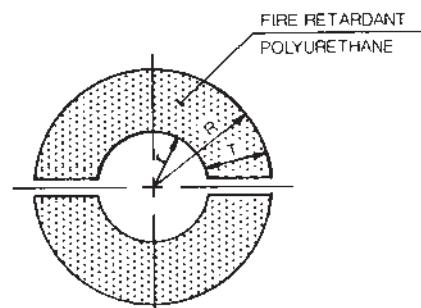

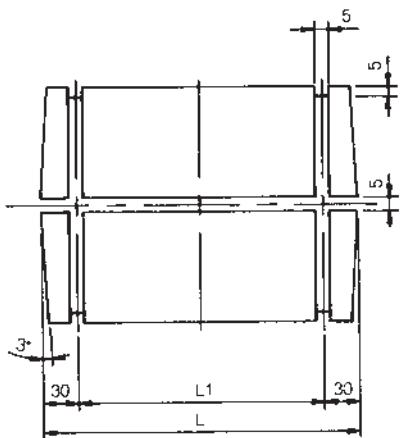

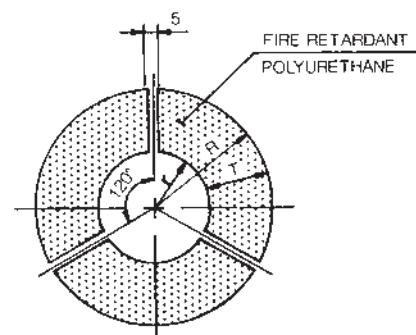

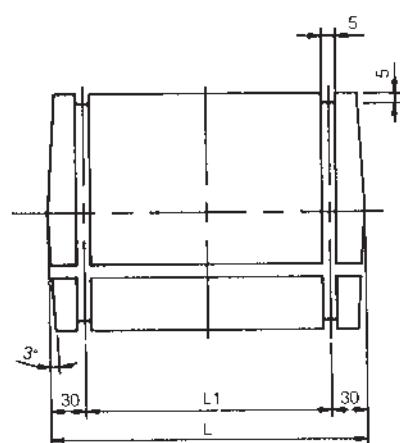

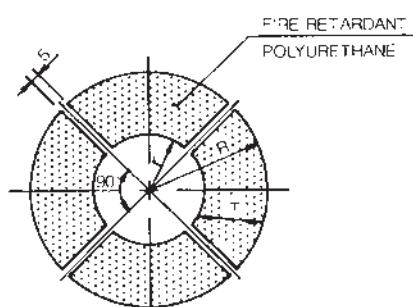

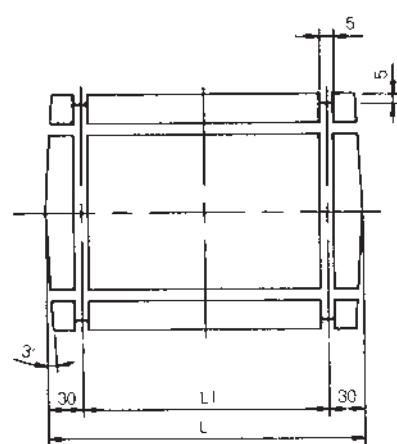

Any types of pipe supporting urethane cradle to be used following customer's requirements, please contact UNISON.

PHYSICAL PROPERTIES :

- Density : 500 kg/m^3
- Compressive strength : higher than 170 kg/m^2
- Bending strength : higher than 200 kg/cm^2
- Thermal conductivity : less than $0.084 \text{ kcal/Mhr } ^\circ\text{C}$
- Coefficient of thermal contraction : 50×10^{-6}
- Flame spread : less than 25
- Closed cell content by volume : more than 90%
- Water absorption : less than 1 g/100cm^2
- Working temperature range : $-190 \sim +80^\circ\text{C}$

FEATURES :

1. The density of polyurethane cradles can be depending on where they are to be used, thereby enabling you to obtain the cradle with strength most appropriate for your purpose.
2. Polyurethane cradle supports are light-weight compared with oakmade or FRP support.
3. Being highly reliable in water and resistant to oil and corrosion, they do not need any preservative treatment such as creosote impregnation.
4. Having high weather-tightness, they resist weathering and corrosion in long-term outdoor use.
5. They exceed in physical strength against compression, bending and shearing.
6. Polyurethane cradle supports are suitable for mass production as they are molded.
7. Forming incorporated with other material is possible.
8. Free of grains, homogenous and standard quality cradles can be obtained in large quantity at the same time.
9. Because of their low water absorption, they do not incur cracks from icing during storage or operation.
10. Polyurethane cradle supports are standardized in a variety of sizes and dimensions, thereby facilitating various pipe support designs and installation methods.
11. Also available from UNISON are special series products with enhanced heat and flame resistance.
